

# Subwatersheds of Elkhorn and Moro Cojo Sloughs, Showing Watershed Restoration Areas North County Planning Area

 Watershed Restoration Area\*

 Subwatershed Boundary

 North County Planning Area Boundary

\* Watershed Restoration Areas are subwatersheds in which the existing land disturbance (or bare ground) is greater than the recommended land disturbance target as shown in Table 1 of the North County LUP. Hence, the objective of restoration in these areas is to reduce erosion and sedimentation to sufficient levels (such as 50% of land disturbance target) and ultimately reduce excess sedimentation into Elkhorn Slough.
