

Dear California Coastal Commission,

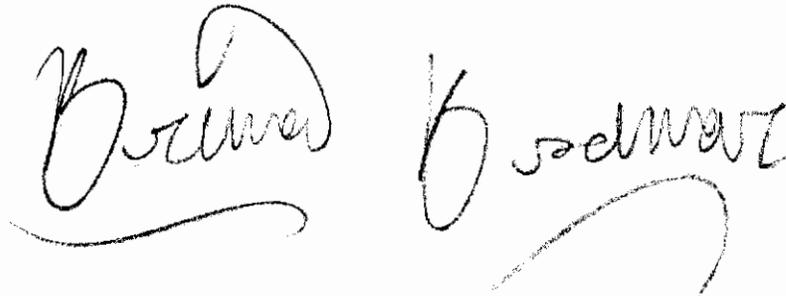

Hello. My name is Brina and I am an eighth grader at Piedmont Middle School. Right now I am in green team and we are learning about sea-level rising and how to prevent it. To help keep the coast healthy and prevent sea-level rising I will be recommending these choices for you.

First, I think you should use setbacks. This will push construction back and save many plants and animals. Something else that I think you should use is dune management. Protecting the dunes will not only save the dunes, but many habitats and it will most likely change the sea- rising. Like the last two recommendations, ecological buffer zones will help with sea-rising and protecting habitats. My last recommendation is to use storm water management. This will not only prevent the water in the ocean become polluted, but this will prevent pollution in many other places.

Thank you for keeping the California coast healthy and clean.

From,

Brina Bodnar
