

SLR Report

Mike Bullock [REDACTED]

Wednesday, October 23, 2013 3:43 PM

Greetings,

I am a retired satellite systems engineer. I often give presentations on climate. People need to understand the magnitude of the threat we face and the magnitude of the policy changes we need to have a chance to stabilize the climate at a livable level.

Your report does not help.

I looked at the Executive Summary. Here is where it misses the boat. SLR depends on the assumptions as to the temperature rise trajectory of the Earth . This depends on luck and what GHG reduction trajectory we (humanity, but California needs to set a good example) achieve. As an example of the trouble we are in, SANDAG wants to ignore the whole problem and keep building freeways. If we ignore S-3-05, there is little hope. We will be overwhelmed. The CC report fails to explain any of this. It is a misleading white wash. Environmentalists, will, for the most part have no complaint, I fear. They think any discussion of SLR is good, I fear.

Please bring the SLR report in line with reality. The policies adopted by the governments of the world ***will matter***.

Really. As Yogi Berra would say, "you can look it up".

Regards,

Mike Bullock
